

Remarks

The specification has been amended to correct minor grammatical errors and an improper word choice resulting from a misspelling. The amendment replaces the term "choke" with the term "chock" and adds language to more precisely describe the invention component identified by the term. "Chock" is used to describes the wheel blocks or saddles mounted to the press frame, within which the cart wheels are seated to position the press over the cart axle. The use of "chock" within the context and meaning of the specification is consistent with the dictionary meaning of the term.

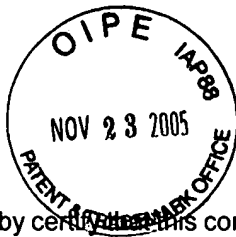

Claims 1-20 have been cancelled and new Claims 21-26 have been added. New Claims 21-26 are directed to the hand held embodiment of the invention. Applicant submits that the claimed invention is neither anticipated by nor obvious in light of any of the cited prior art. None of the prior art discloses or suggests a hand held apparatus for affixing push nuts to the axle rod of a toter cart, which includes wheel chocks that properly position the press over the axle rod between the abutment part and ram. In addition, the prior art does not disclose or suggest an abutment part and wheel chock that can be selectively positioned along the press frame to accommodate axles of differing lengths.

The Applicant respectfully submits new Claims 21-26 are now in acceptable form for a notice of allowance. Applicant respectfully requests that a timely Notice of Allowance be issued in this case.

Respectfully submitted,

R. Tracy Crump
